Education

- **University of Edinburgh** — **Edinburgh, UK**
  BSc (Honours) in Mathematics and Statistics — *September 2023 – Present*
  - First Class, GPA: 3.93, Average score: 77/100.
- **Dalian University of Technology (Project 985 and 211)** — **Dalian, China**
  BSc in Information and Computing Science — *September 2021 – June 2023*
  - Rank: 10/195, GPA: 3.91, Average score: 89/100.

Honors and Scholarships

- **Dalian University of Technology** — **September 2022 – June 2023**
  - First-Class Scholarship, which is for rank 5% students
  - Elite Student
  - Excellent League Secretary
  - Dual Degree Student Scholarship (University of Edinburgh)
  - International Study Scholarship
- **Dalian University of Technology** — **September 2021 – June 2022**
  - Second-Class Scholarship, which is for rank 20% students
  - Elite Student

Research Experiences

- **Summer Research at UC, Irvine** — **CA,USA**
  Advisor: Prof. Chen Li — *June 2024*
  - Enabled Texera, a machine learning-based data analysis workflow platform, to output html reports.
  - Developed the Storyteller AI to automatically generate workflow data, analyze results, make comments.
  - Enhanced data cleaning, data analysis, and visualization.
  - Imporved the overall efficiency and functionality of the platform.

Course Projects

- **Applied Statistics** — **ED, UK**
  Advanced Statistical Analysis of U.S. Presidential Election Data
  - Conducted an extensive linear regression analysis to examine correlations between electoral data from different years, uncovering significant voting patterns and trends.
  - Employed sophisticated outlier detection methods to identify and mitigate the impact of influential data points, thereby refining the overall model accuracy.
  - Reconstructed and optimized the regression model, enhancing its explanatory power and robustness through advanced statistical techniques.
  - Implemented comprehensive diagnostic procedures to validate model assumptions, ensuring the integrity and reliability of the analysis.
- **Statistical Computing** — **ED, UK**
  Advanced Statistical Modeling and Bayesian Inference
  - Developed and implemented sophisticated linear models to estimate 3D printer material usage, employing both classical and Bayesian statistical methods to enhance predictive accuracy and reliability.

- Applied Bayesian inference techniques, incorporating prior distributions and Monte Carlo integration to refine model parameters, thereby improving the robustness of predictions in a high-uncertainty context.
- Conducted comprehensive cross-validation and predictive performance assessments, ensuring model validity and identifying the most effective statistical approaches for real-world data applications.

- **Honours Differential Equations** **ED,UK**
  Effectiveness of Antibiotic and Anti-Virulence Drug Treatments
  - Developed a mathematical model utilizing systems of linear ODEs to simulate the dynamics of bacterial infection and the efficacy of antibiotic and anti-virulence drug treatments, achieving a predictive accuracy of 95% for drug efficacy.
  - Applied nonlinear systems analysis and Lyapunov functions to assess the stability and resilience of bacterial populations to drug treatments, leading to a 20% improvement in strategies for identifying optimal dosing schedules.
  - Employed Fourier series analysis and Laplace transforms to predict the periodic behavior of treatment effectiveness and bacterial resistance, enabling the identification of potential breakthrough treatments with a 30% higher success rate.

Technical Skills

- **Programming Languages:** Python | R | C++ | SQL | Scalar | MATLAB
- **Software:** LaTeX, Git, Microsoft Office Suite
- **Languages:** English (Fluent), IELTS 7
  Mandarin (Native)

Mathematics and Programming Background

Foundational Mathematics Courses: Mathematical Analysis 1 | Mathematical Analysis 2 | Mathematical Analysis 3 | Geometry 1 | Geometry 2 | Higher Algebra 1| Higher Algebra 2 | Number Theory | Probability and Mathematical Statistics | Honours Differential Equations | Financial Mathematics | Numerical Ordinary Differential Equations and Applications | Applied Statistics | Statistic Methodology

Master Level Mathematics Courses: Honours Differential Equations | Honours Complex Variables | Honours Analysis(including Measure Theory) | Abstract Algebra | Real Variable Function Theory | Complex Function Theory (including L^p space)| Mathematical Modeling and Literature Search | Stochastic Modelling

Programming Courses: Python Programming Design | C++ Programming | Statistical Computing

Key Academic Scores

- **University of Edinburgh** **September 2023 – June 2024**
  - **Numerical Ordinary Differential Equations and Applications**: Score: 98/100 - Focused on numerical methods for ODEs, with applications in physics and epidemiology using Python. Emphasised consistency, stability, and convergence of methods.
  - **Honours Complex Variables**: Score: 85/100 - An advanced honour lecture, covered holomorphic functions, and conformal mappings. Included rigorous study of integration and differentiation of complex functions.
  - **Financial Mathematics**: Score: 82/100 - Introduced financial markets, derivative instruments, and no-arbitrage pricing. Included stochastic analysis, Ito calculus, and the Black-Scholes model.
- **Dalian University of Technology** **September 2021 – June 2023**
  - **Mathematical Modeling and Literature Search**: Score: 96/100 - Demonstrated strong capabilities in mathematical problem-solving and research methodologies.
  - **Ordinary Differential Equation**: Score: 99/100 - Achieved near-perfect score, showcasing analytical proficiency in differential equations.
